Traversal Expansion vs. Attribute Selectivity ($N = 100,000, k = 10, ef_S = 50$)
InGraph ($ef_C = 50$, baseline)
InGraph ($ef_C = 100$, ablation)
Ultra-Selective Regime ($\sigma \leq 2\%$)
Exploration Spike:
~15,900 nodes visited
for both efC=50 and 100
Graph Nodes Visited (out of 100,000)
Query Filter Selectivity $\sigma$ (log-scale)
